Basic Audio & Midi Engineering

Do you think you have what it takes to make it in the music industry but you don't know how to create your own background tracks?

You can learn everything you need to know to create your own original songs just like the pros through private lessons. Each student begins with a preliminary assessment to determine his or her experience and goals, and then receives their personalized lesson plan. Since each person is different, learning each week could include any of the following:

- The Fundamentals of Sound
- Connecting Your Hardware
- Understanding Your DAW
- MIDI Basics
- The Channel Strip
- Running a BUS
- AUX Channels
- Synths
- ADSR
- Microphones
- Recording Basics

Most students chose to learn out of traditional music books but this is not a requirement. Each student is required to have his or her own computer/iPad/tablet, software, and microphone. Recommendations can be provided to those unsure of which to purchase. Annual recitals and performance opportunities are available for those that wish to show off their new talents.
